TABQUARTZ

HIGH DENSITY QUARTZ WITH LUSTER TECHNOLOGY

TABINDIA.COM

HD Quartz - High Density Quartz with Luster Technology

TAB has developed a product that is High Density and compressed so well that you cannot see the grain in it. This is a new age quartz, a better pressed and developed engineered stone slab.

UV Stabilized Resin & the Best Quartz accumulated from around the world

TABQUARTZ is composed of UV stabilizing resin, which if used correctly can make the quartz slabs as robust as natural stone for color and strength. TABQUARTZ slabs have no effect on them due to the ultraviolet rays and lights of the sun.

With our signature 'Luster Technology.'

TAB is known for its premium polishing on natural stone worldwide. TAB has always lead the way in development of its 'Luster Finish Technology,' on slabs in natural stone & now in Quartz.

It's a special polish that fuses the imperfections, and cavities to make an even surface which polishes like none other. Tab's 'Luster Technology,' is a patented technique which gives our slabs in all finishes a unique glazed appearance and the finish is unparalleled in the industry.

Huge slabs

TAB slabs in quartz are 327cm x 164cm, billed at 325cm x 162cm

Accuracy in Calibration, each slab perfectly beveled

All the details matter. The slabs are calibrated to the highest level possible. And the beveling resembles a honed quirk miter. Every centimeter of the slab is usable.

Static film and not glue

TAB uses a thin polymer film that can be removed with a finger, unlike most quartz companies across the globe. The film is adhered electro statically and not with glue.

A very Low Emission Quartz Plant – Low VOCs

TAB uses resins with lowest amount of compounds like styrene which cause VOC's. Visit the plant to experience this and its in our slabs as well. Low emissions all around.

From Natural Stone to Quartz all under the same roof

TAB has been producing natural stones for over 2 decades. The addition of quartz has been a fantastic addition. Containers can be mixed with natural stone.

Finishes

TAB's finishes on quartz slabs stand out! No absorption, tightly packed surfaces. Polished, Honed, Satin/Leather

\$10/sm or \$0.99 cents per sf for finishes honed or satin/leather.

With Luster Technology

Sampling Program

4"x 4" x 1cm

10cm x10cm / not polished on all 4 sides - \$0.60 per sample

12.5cm x 25cm x 2cm

5" x 10" x 2cm polished 4 sides - \$2 per sample

Container Loading / 21 tons –

255kg per slab is weight in 2cm

4.47kgs/sf

9.83lbs/sf

380kg per slab is weight in 3cm

6.67kgs/sf

14.66lbs/sf

54-60 slabs 3cm per container around for 21.5 tons

A+

Premium quality UV resistant resin, which means the color is intact, and resistant to UV. Quartz Grit is premium grade without any contamination. Belgian Quartz/Cristobalite may be used in some of these colors. This is a top quality product.

A

Means normal non UV resistant resin

Difficulty Levels of production: E for easy ; M for medium difficulty ; and D for difficult to make

Finishes P = polished, H = honed, S = satin/leather (indicated for each color, only what is indicated can be done)

Minimum usage of Resin just to suffice the bonding & curing process (7 to 9% by weight)

Right & balanced formulations to achieve the best of mechanical & physical properties... low water absorption, high scratch hardness and high toughness and impact resistance.

High chemical & stain resistance for most of the house-hold materials used renders TABQUARTZ suitable for all kinds of house-hold applications including flooring having medium & low traffic density. TABQUARTZ offers coarse grit slabs that can withstand high traffic density areas

Guaranteed anti-bacterial & Nil volatile chemical residue surfaces and thus ideal for house-hold applications

Guaranteed thaw & frost resistance slabs suitable for any kind of harsh environment

Excellent colour clarity of final product due to the usage of

- Clean and Contamination free** Semi-Transparent Quartz filler and grit having high purity and high whiteness value
- Very clear polyester resin** having very low colour index of 0.2 (nearly colourless) on Gardner scale
- Pigments from Germany**... DuPont, Bayferrox, Kronos

Guaranteed colour and pattern consistency across production batches due to high level of automation of the production line

Excellent dimensional stability (post-delivery) guaranteed as the established process procedure takes care of 100% curing of slabs before polishing

Well-equipped Lab facilities ensure faster product development and thorough testing of final outgoing product
